FOREWORD

Nationally produced Statistics is the basis for timely, reliable, comparable and available information on social, demographic, economic and environmental conditions which are crucial for evidence-based policy decisions and a democratic society. The Statistical Yearbook 2013 publication is the 33rd edition in the series, which is a comprehensive and systematic compendium of statistical information on Maldives demonstrating the social and economic developments and the demographic transitions taking place in the Maldives. It attends to 20 areas of the economy and has 192 tables. Detailed tables are provided on the CD-ROM version of the publication.

The Statistical Yearbook 2013 highlights a range of key economic indicators for 2012, such as the gross domestic product (GDP), contribution of key economic activities to the GDP, Government's finance, imports and exports, and the rate of inflation, in addition to diverse indicators about social and other aspects of the country. The publication is also made available, free of charge, on our website www.planning.gov.mv.

The Statistics Division of the Department of National Planning is responsible for the development of the national statistical system in addition to the collection and compilation of the core social and economic statistics. Apart from that, the responsibility of collecting and compiling some specific areas of statistical data lies with other agencies of the government due to the decentralized statistical system.

Effort has been made to ensure that this publication meets acceptable statistical standards. Hence, the entire process of data validation, compilation and updating has been done in close collaboration with all the data providing agencies.

The data in the Statistical Yearbook 2013 will serve as the principal source of information for planners, policy makers, researchers and academicians. It is also intended to serve the quest for information by clients in the global community. In this regard, we will always welcome comments and suggestions from our users to make the statistical information interesting and useful to the changing needs.

Reliable statistics shows the true picture of people's everyday lives. It provides the evidence required to develop and monitor effective development policies. Recognizing the value of statistics in the development of our society, we ensure our commitment to serve all statistical needs and will continue our efforts to improve the quality of the statistics of the Maldives.

INTRODUCTION

The Statistical Yearbook of Maldives is published with the objective of providing comprehensive statistical information on various aspects of the economy and social conditions in the Maldives. This is the 34th issue of the annual series.

This issue includes data on the country's geography and environment as well as its population and housing, employment, health, education, law and order, social protection and pensions, elections and political parties and other social areas. Data related to the economic sectors – fisheries and agriculture, tourism, transport and communication, electricity and water, public finance, money and banking, foreign trade and balance of payments, national accounts, and prices are also included.

Efforts have been made in this issue to widen the coverage and include up to date revision of data published in previous years. With the intention of providing easy access to statistics for users, the tables published in the Statistical Yearbook of Maldives is made available on the Department website (<http://www.statisticmaldives.gov.mv>). This publication is also available on CD-ROM.

We look forward to comments and suggestions from users for improving the quality and usefulness of this series.

1/ Consumption aggregate is derived by aggregating households' expenditures on goods and services so as to approximate the value of consumption achieved during the reference period. It excludes lumpy expenditures such as on weddings, housing constructions, Consumer Durables, actual rent paid, travel abroad for Hajj.

Consumption aggregate is used to define the measure of welfare which is used for poverty analysis.

2/ Poverty lines for previous years have been adjusted to account for inflation.

Please note that the birth/death figures in the The Maldives Health Statistics (published annually) are taken from the VRS. Under-reporting is challenge with regards to the VRS system, whereby data received from various sources are entered at various points in time. For instance, a 2004 birth record may be entered into the system today as it may have only been reported today. Therefore, the statistics are correct at the point of data retrieval and will change as more events are reported and recorded in the system. These continuous changes will therefore not be reflected once statistics are published.
