QUARTERLY GDP SUMMARY

Third Quarter Real QGDP 2022 at market prices is MVR 19,942 million.

When compared to the preceding quarter (2022 Q2), 2022 Q3 shows a growth of 0.7%.

Compared to the corresponding quarter (2021 Q3), 2022 Q3 shows a growth of 10.5%. This growth is primarily reflected by the positive contribution to growth from Tourism sector 3.0%, Transportation and communication sector 2.1% and Wholesale and retail trade 1.9% (Figure 1).

As shown in Figure 2 below, when compared with the corresponding quarter, over the past years, the QGDP growth rate shows positive growth till the end of year 2019. All quarters of 2020 and first quarter of 2021 show negative growth rates for corresponding quarters. The main reason for this decline was due to the impact of COVID-19 pandemic. However, starting from 2021 Q2 all subsequent quarters show positive growth rates respectively with 19.5% for 2022 Q1, 27.0% for 2022 Q2 and 10.5% for 2022 Q3.

Annual updates generally incorporate newly available major annual source data as well as some changes in methods and definitions to improve the accounts.

REVISIONS ANALYSIS FOR ASSESSING QNA RELIABILITY

Table 2 shows the series of corresponding quarter growth rates as published at each release month.

The July 2021 publication (third row) shows the third estimate of 2020 Q3, likewise second estimate of 2020 Q4 and first estimate of 2020 Q1.

By column, the revisions triangle shows the revisions history of one specific quarter.

For example, the ninth column shows that the initial estimate of 2021 Q1 (-8.6%) has been revised (-10.1%) downward in September 2021 publication and again revised (-9.2%) upward on March 2022 publication.

Finally, the triangle can also be analyzed diagonally. The main diagonal includes all the first estimates of the quarters, the secondary column the second estimates, and so forth.

Table 3 shows the revisions indicators of corresponding quarter growth rates. Revisions indicators are calculated as descriptive statistics of a revisions history.

Each statistic aims at measuring a specific characteristic of the revision process. In general, direction, size, and dispersion of revisions are the most salient features of a QNA revisions process.

a. Mean Revision (MR) is a measure of direction of revisions. A MR value close to zero indicates that there are no directions in the revisions. When the MR is positive, the preliminary estimate is on average below the later estimate (downward bias); when the MR is negative, the preliminary estimate is on average above the later estimate (upward bias).

b. Mean Absolute Revision (MAR) is a simple average taken in absolute values. The MAR disregards the sign of revisions. It can be zero when positive, and negative revisions perfectly offset each other. The MAR is a measure of the size of revisions. The larger the MAR value is, the less reliable the preliminary estimate is compared with later ones.

c. Standard Deviation of Revision (STDR) is calculated as the standard deviation of growth rate. It is a measure of dispersion of revisions around the mean value. The smaller the STDR value, the closer are the revisions to the MR value. A high STDR value indicates large fluctuations in the reliability of early estimates between quarters.

d. Range of Revision (RR) is the difference between the maximum revision and the minimum revision. Always nonnegative, the RR value provides an immediate quantification of the spectrum of revisions occurred in the past.

ROUNDING Any discrepancies between totals and sum of components in this publication are due to rounding.

UPDATING GDP MBS releases three vintages of the current quarterly estimate for GDP: "Advance" estimates are released with a four month gap and are based on estimates or source data that are incomplete or subject to further revision by the source agency; "second" and "third" estimates are released with a seven months lag and a ten months lag, respectively, and are based on more detailed and more comprehensive data as they become available.

Annual and comprehensive updates are typically released in late September. Annual updates generally cover at least the 3 most recent calendar years (and their associated quarters) and incorporate newly available major annual source data as well as some changes in methods and definitions to improve the accounts.

Comprehensive (or benchmark) updates are carried out at about 5-year intervals and incorporate major periodic source data, as well as major conceptual improvements.
