MEASUREMENT OF CHANGE IN THE PRICE INDEX

Change over previous month (month-on-month) compares the index of the month with that of the preceding month. Such comparisons measure the change in the average prices between two consecutive months. They serve as useful short-term indicators of the price movements in the non-seasonal industries.

Change over same month of previous year (year-on-year) compares the index of the month with same month of previous year. The measure gives how an industry is growing over 12 months. It reduces the seasonality effects in the indices.
