

Economic Survey 2012 - 13

FOREWORD

Government's economic development policies accord a high priority to promoting business opportunities and investments in the country. Strengthening of the Small and Medium Enterprises (SMEs) is seen as a means to facilitate economic diversification and to provide employment opportunities, especially for the youth population of the country.

It is important to collect statistics on business, to inform policy makers and to enable evidence based decisions. This survey provides valuable information for a better understanding of the economic activities and performance of business. It includes, establishment operating in Male', Addu city and eight islands in the Atolls with 2,500 and above population. In addition it includes tourist resorts.

Survey found that, 80 percent of the establishments covered in this survey were SMEs with employment below 10. However, they provided only 20 percent of the employment. Retail trade was the economic activity carried out by half of the establishments covered in this survey. This points towards easy entry into this business and a tendency for increase in the imports of goods, in our highly import dependent small economy.

It also showed that cover one third (36%) of the employment remained in the tourism industry, which accounted for only 2 percent of the establishments. The survey also showed on third (35%) of the establishments fall in the corporate sector.

The survey continued to maintain an overall response rate of 65%, which for the tourist resorts were much lower at 39%. To improve the quality and reliability of the survey findings, we need to increase the response rate. It is critical that reliable information on establishments, especially large ones get covered. This highlights the urgent need for a statistics law and for increase awareness in the importance of providing data for national statistics.

Development and maintenance of an updated statistical business register is essential for proper representation of different economic activities in business surveys. Such a register should include all businesses in operation in the different islands of the country, with basic information such as their main economic activity, employment of locals and foreigners. Use of such a listing frame for sampling will help reduce costs and minimize respondent burden.

I sincerely thank each and every respondents of our survey for the valuable information you provided.

Mr. Abdulla Jihad

Minister of Finance and Treasury

ACKNOWLEDGEMENTS

Publication of this document is only made possible through the timely and valuable contribution of different public and private organizations and the respondents of our survey from selected establishments. Hence, we gratefully acknowledge and thank them for the valuable information provided and the cooperation extended by all the respondents of our survey.

We would like to thank the Ministry of Economic Development, Maldives Inland Revenue Authority and other agencies who provided the list of establishments for use as survey frames.

The high-school graduates involved as enumerators and staff of the statistics division (Currently the National Bureau of Statistics) as supervisors deserves special recognition for their hard work.

The unrelenting effort of the staff of NBS under considerable staff constraints is highly commendable. In this regard, the significant contributions made by the National Accounts Unit of NBS is duly recognized. The hard work and contributions at all stages of the survey is acknowledged as follows. Sample design was prepared by Ms. Fathmath Hashiya and Ms. Fathmath Nihan in close coordination with Ms. Mariyam Niyaf and Ms. Aishath Laila. Preparations, implementation and management of the survey in terms of the questionnaire design, training manual, conduction of training, was led by Ms. Aishath Hassan and Ms. Fathmath Nihan with involvement of the staff Ms. Fathmath Hashiya, Mr. Mohamed Fathih, Ms. Mariyam Mirfath and Ms. Mariyam Shaffau Shareef. Data processing and cleaning was carried out by Ms. Nazima Shareef, Mr. Ahmed Shaheed in close coordination with ADB consultant Dr. Swaraj Kumar Nath.

The survey report was written by ADB consultant Dr. Swaraj Kumar Nath, Ms. Aishath Hassan, Ms. Mariyam Shaffau Shareef, Ms. Mariyam Mirfath, Ms. Fathmath Hashiya Mr. Mohamed Fathih and Ms. Mariyam Shadeena. The layout, compilation and design of publication were done by Ms. Aminath Mushfiqa Ibrahim.

Our gratitude goes to the Administration and Finance Section for their support and facilitation in smooth implementation of the survey operation.

Overall guidance and support throughout the survey process was provided by the senior management of NBS, Ms. Mariyam Niyaf and Ms. Aishath Shahuda.

EXECUTIVE SUMMARY

The Economic Survey (ES) 2012/2013 was the second survey of its kind designed to integrate all economic activities of the Republic of Maldives. The survey covers large, medium and small enterprises carrying out various economic activities. However, informal economic activities carried out by the household sector is out of the scope of this survey.

The main objective of Economic Survey 2012/13 is to collect information on the performance of different industries and find out their contribution to Gross Domestic Product (GDP) of Maldives. It will also be used to obtain weights for the compilation of producer price index (PPI).

The reference period for this survey was 2011. However, for those establishments that do not maintain accounting records, the reference period was the month prior to data collection. The data collection was carried out for 5 months, from January 2013 to May 2013. A total of 96 enumerators were involved in the data collection operation, including the listing operation, carried out in Male', during 2012.

Two-stage stratification was done for ES 2012/2013. In the initial stage, the islands for enumeration in the survey were grouped based on the population. A total of nine islands with a population of 2,500 and above, based on Census 2006, were selected and enumerated in the survey. Data collection was done in all six wards of Male', six islands of Addu City, HA. Dhidhdhoo, HDh.Kulhudhuffushi, R.Dhuvaafaru, R.Un'goofaaru, Lh. Naifaru, Lh. Hinnavaru, GDh. Thinadhoo and Gn. Fuvahmulah. The second stage of stratification was for Male' and Addu City only, based on the economic activity carried out and the number of employees. Electricity (D), Water, sewerage, waste (E) and Financial services (K) were census sectors for Male' and Addu City. All the establishments with employees 20 and above were auto-selected for enumeration. The resorts are an exception to this rule where a sample of 80 resorts was selected out of the 100 operational resorts in 2011.

The survey covered over 6,141 establishments, of which 4,506 establishments were in Male', 386 establishments in Addu City, 100 resorts and 1,149 establishments in the other islands enumerated. Approximately 52 percent of the establishments enumerated were engaged in retail trade activities.

The number of expatriate workers was 33,107, which accounts for 40 percent of the total labour force, 83,550. The ratio of local to foreign workers in ES 2012/2013 in Male' was alarmingly high with 100:77, while in the resorts it was 100:65. However in Addu City and other islands enumerated the matter is not so serious. The ratio 1:0.39 in Addu City and 100: 12 in the other islands covered in the survey.

This report will not be comprehensive without including the gender perspective of the workforce. A total of 7,181 employees were females, which accounts for around 9 percent of the total employment. Males dominate all the economic activities in the private sector. Males were most dominant in the resorts sector, where only 3 percent were female workers. With 48 percent, even though the number of males dominates the education sector, the proportion of females was much more in that sector compared to all the other sectors. Education sector was followed by health sector which had one-third of the workforce as females.

According to ES 2012/2013, the largest industry in terms of provision of employment opportunities is resorts, which accounts for 36 percent of the total employment. The second largest industry in terms of employment is wholesale and retail trade, which comprises of over 20 percent of the total employment. Industry I, Accommodation and food service activities (excludes resorts), was dominated by expatriate workers which was over 70 percent of total workforce in that industry.

One of the key outcomes of the survey was the size of the corporate sector to the Maldivian economy. Of the findings, over 72 percent of the private sector employment is generated by the corporate sector and more than 74 percent of the remuneration is paid by the corporate sector. The sector generates operating receipts of nearly 12 billion and 90 percent of the fixed capital is reported by the corporate sector.

ES 2012/2013 was the first nationwide survey that included an assessment of the significance of the own-account enterprises to the Maldivian economy. Approximately 12 percent of establishments are own-account enterprises and nearly a third of all establishments in Addu City and the atolls are own-account establishments. In fact, nearly 60 percent of own-account enterprises are engaged retail trading activities and 58 percent of all the unpaid workers engage in trading activities as well. This highlights the contribution of small enterprises in job creation and poverty reduction.

The results obtained from this survey would also be very useful for guiding private sector development for investors. Individual businesses can use the survey results in monitoring the output and performance of their establishment vis a vis that of the industry and national averages.

INTRODUCTION

The Economic Survey (ES) 2012/2013 was the second survey of its kind designed to integrate all economic activities of the Republic of Maldives. First Economic Survey was conducted in 2007/2008, aimed to overcome the limitations in Large Establishment Survey (LES) and Small Establishment Survey (SES) by bringing all of these economic activities of corporate and unincorporated sectors under one broad umbrella.

Even though ES 2012/2013 was initially the survey was designed to produce independent estimates of the economic activities carried out by the establishments in Male', Addu City and Atolls due to budget constraint and unavailability of a sampling frame despite of trying to compile one, the scope of this survey is limited to Male', Addu City and the 8 selected islands. The eight selected islands are HA. Dhidhdhoo, HDh. Kulhudhuffushi, R. Ungoofaru, R. Dhuvaafaru, Lh. Naifaru, Lh. Hinnnavaru, GDh. Thinadhoo and Gn. Fuvahmulah. Hence users should be careful in using its data for statistical purpose.

The data in respect of Male', Addu and Resorts have been boosted for Sample sector with "Multipliers" taking care of non-response etc. so that a complete picture of Male', Addu, eight selected islands and Resorts could be known for sample sector. The total picture has been derived after adding the data of corresponding ISIC sectors from Census sector. However all small Islands within Atolls having population less than 2500 have not been covered under the scope of this survey and therefore, the estimates of all parameters produced in this respect in respect of Atolls are exclusive of those Islands. It is worthwhile to mention that the financial sector was initially included within the coverage of the Census sector but due to very poor response, it has been decided to exclude this sector from the scope of ES 2012-13. It may be noted that the National Accounts Section does have estimates of Financial Sector otherwise which they use for computing GDP of the Maldivian economy. Thus, exclusion of this sector from the purview of this report will no way affect the economic data system of the country.

Like previous survey ES 2007-08, the Questionnaires of ES 2012-13 adopted two different kind of reference periods namely, "last month" and "annual". This was done in order to have better data capture and reduce "recall" lapse. But in order to have uniform reference period and to make the data of same characteristic additive it has been decided to convert the datasets from "annual" reference period into "last month" reference period. Thus all Tables produced in this report refer to the data for "Last month" reference period. Similar practice was followed during ES 2007-08.

OBJECTIVES

The main objective of this survey was to collect information on the performance of different industries and their distribution to the Gross Domestic Product (GDP) of Republic of Maldives. In addition, the data will be used to derive weights for Producer Price Index (PPI). It would also be used for monitoring the achievements of some of the national and sectorial development goals and targets set by the government.

SCOPE AND COVERAGE

ES 2012/2013 covers large, medium and small enterprises carrying out various economic activities. Although informal sector covers a wide range of labour market activities, all informal economic activities carried out by the household sector is out of the scope of this survey. All economic activities that are not regulated by any government authority are considered as informal sector.

All economic activities excluding ISIC Division 02, ISIC Tabulation Categories Mining (B), Financial sector (K), Real estate (L), public administration (O), activities of households as employers (T) & activities of extraterritorial organizations and bodies (U), are covered under the scope of this survey. As mentioned above, economic activities undertaken within the households and not having any fixed business location, are kept outside the scope of the survey.

The survey was designed to collect data of the accounting year 2011. However, if the establishments do not have 2011 records, 2012 data were taken. As for the establishments that do not maintain annual records, data of the previous month were collected. In the Maldives most of the small establishments do not maintain annual or business records. The tax system was implemented very recently in Maldives, requiring the establishments to maintain business records. As a result, it is expected that, the accounting practices will improve in the near future.

Due to unavailability of a proper sampling frame and budget constraints, Economic Survey 2012/2013 was conducted in the most populated islands. The survey was conducted in Male', Addu City (S. Hithadhoo,S. Feydhoo,S. Maradhoo ,S. Meedhoo,S. Maradhoo-Feydhoo,S. Hulhudhoo) and the following 8 islands in the Atolls: HA. Dhidhdhoo, HDh. Kulhudhuffushi, R. Unyoofaru,R. Dhuvaaafaru, Lh. Naifaru, Lh. Hinnavaru, GDh. Thinadhoo and Gn. Fuvahmulah. In addition to this it included a sample of Resort Islands. The survey excludes inhabited islands in the country with the population below 2,500 persons.

CHAPTER I

Sampling Methodology

SAMPLING METHODOLOGY

1.1 Frame

Due to the non-existence of an updated list of businesses in the country let alone a business register, a frame was compiled by using various administrative lists made available by different ministries and agencies. After compiling and analyzing these lists it was found that these were not up-to-date and variables such as main economic activity of the establishment or employment were not included. In many instances, the available lists were not at the establishment level and the location of establishment was not included.

Hence, a survey exercise to obtain a listing of the establishments with identification of their main activity and employment was undertaken in Male' as well as in the other regions. Listing in Male' was done by hired enumerators while listings in the islands were undertaken with the help of island councils. However, despite many reminders, listings from 52 islands were not received. Due to this, only the listings for Male', Addu City and the 8 most populated islands in the Atolls were used as sample frames from the listing exercise undertaken in 2013.

A separate sampling frame was prepared for the resort industry sub-group, with lists provided from the Ministry of Tourism.

Once this exercise was completed, the list of establishments was categorized into major 21 sections of International Standard Industrial Classification of all Economic Activities (ISIC rev. 4).

The individual categories of ISIC are aggregated into the following 21 sections:

Section	ISIC revision 4
A	Agriculture, forestry and fishing
B	Mining and quarrying
C	Manufacturing
D	Electricity, gas, steam and air conditioning supply
E	Water supply; sewerage, waste management and remediation activities
F	Construction
G	Wholesale and retail trade; repair of motor vehicles and motorcycles
H	Transportation and storage
I	Accommodation and food service activities
J	Resorts
K	Information and communication
L	Financial and insurance activities
M	Real estate activities
N	Professional, scientific and technical activities
O	Administrative and support service activities
P	Public administration and defense; compulsory social security
Q	Education
R	Human health and social work activities
S	Arts, entertainment and recreation
T	Other service activities
U	Activities of households as employers; undifferentiated goods- and services-producing activities of households for own use
V	Activities of extraterritorial organizations and bodies

1.2 Stratification

The purpose of stratification is to divide the population into relatively homogeneous groups and thereby reduce the total variation. The country was divided into three geographical regions namely, a) Male' b) Addu city and c) Atolls. However, all units relating a) Financial intermediaries (ISIC industry "K") activities and b) Resorts (subset of ISIC industry "I") activities were taken out from the three graphical regions and distributed into two respective Industry sub-sets.

Separate Sampling Frame was prepared for Male', Addu and also for Resort industry sub-group. The sampling frames for these three segments have been prepared by removing the respective "units" already covered under Census sector.

In Atolls, the islands were divided into two strata. That is, below 2,500 population and above 2,500 population based on 2006 population census data. The listings from many of the islands were not received in the time to conduct the survey, and hence stratification had to be done using the information available in the census 2006. Assuming that the most economic activities will be carried out in islands with higher population, the survey was carried out in the most populated 8 islands. All the establishments in these islands were enumerated in the survey.

All the units falling under three regions or two Industry subsets are further divided into two sectors namely, - Census Sector and Sample Sector.

1.2.1 Census Sector

The Census Sector consists of all establishments under the following ISIC categories:

D - Electricity, gas, steam and air conditioning supply

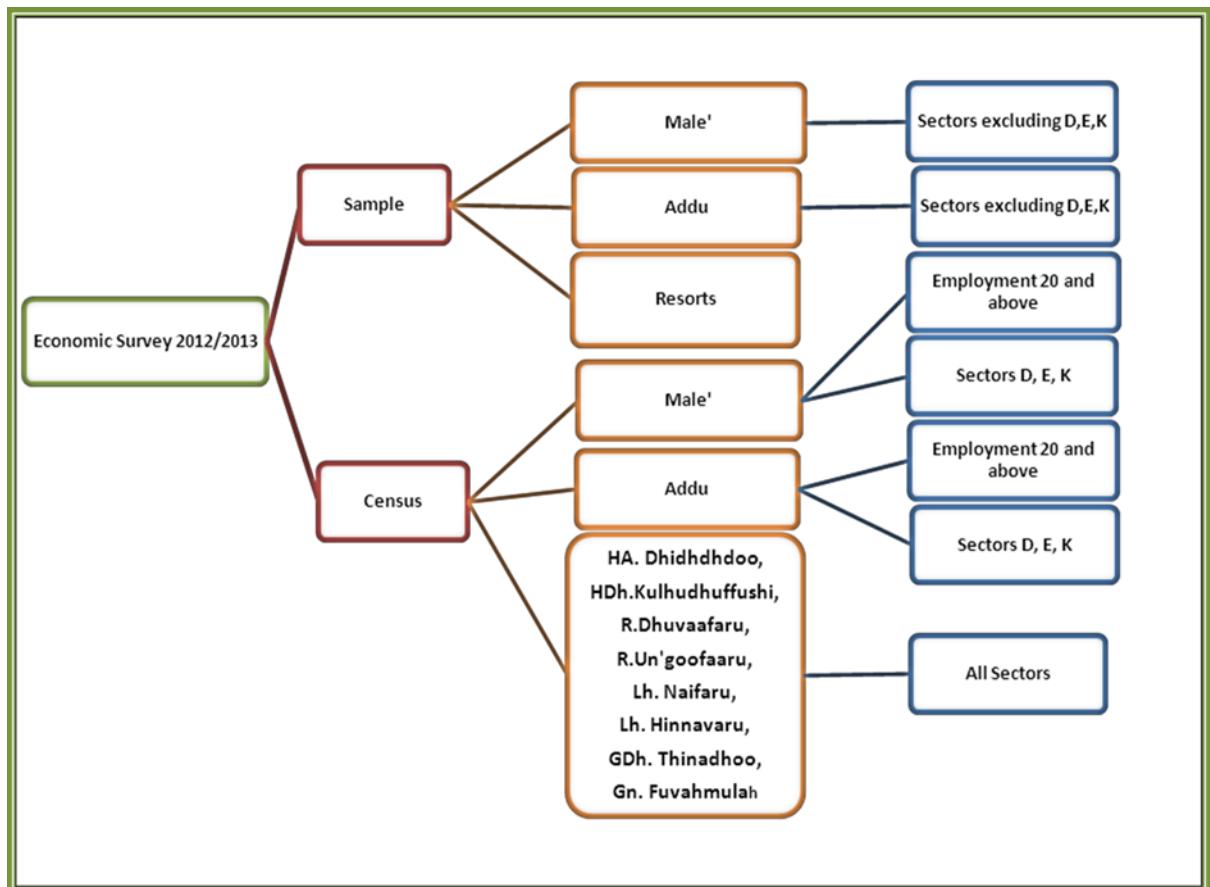

E - Water supply; sewerage, waste management and remediation activities

K - Financial and insurance activities

All Establishments in Male' and Addu having 20 or more workers

All Establishments across all industry groups in the selected islands

Figure 1.1: Stratification

Sample Sector

All units in Male' and Addu excluding units having workers size 20 or more and ISIC industries D, E and K.
 All units within special industry sub-group "Resort"

Sampling frame

Separate Sampling Frame was prepared for Male', Addu and also for Resort industry sub-group. These Sampling frame for these three segments have been prepared by removing the respective "units" already covered under Census sector.

1.3 Sample size and allocation

Economic Survey 2011/2012 reflects the sectors defined in terms of the ISIC. The sample was selected in a way with 5% error margin (distance from the mean) and 95% confidence interval for each section. Online sample size calculator was used to determine the sample size for each sector. <http://www.raosoft.com/samplesize.html> was the website used in determination.

In terms of the number selected, the sample size n and margin of error E are given by

$$x = Z(c/100)^2 r(100 - r)$$

$$n = Nx / ((N - 1)E^2 + x)$$

$$E = \sqrt{[(N - n)x/n(N - 1)]}$$

Where N is the population size, r is the fraction of responses, and $Z(c/100)$ is the critical value for the confidence level c .

This calculation is based on the Normal distribution.

As the response rate is unknown it is set to 50% the most conservative assumption, which gives the largest sample size.

1.4 Non-Response

Non-Response results when data is not collected from respondents. It is important to make all reasonable efforts to maximize the response rate as non-respondents may have differing characteristics to respondents.

Partial non-response occurred due to insufficient information. The respondents refuse to answer questions if they find questions particularly sensitive or not having the records.

Total non-response occurred when enumerators cannot contact respondents or the respondents refuse to answer any questions or participate in the survey. Some of the respondents by not refusing they mention that they simply don't have the time to complete the interview or survey form.

To minimize the non-response various methods were applied. Such as; stress the importance of the survey; explain the importance of their response to get good representation of other units engaged in that activity, highlighting the benefits from the survey results, explain how they can obtain results and most importantly by giving the assurance of confidentiality of the individual data given by the establishment. Where response rates were still low after various attempts of follow-up, intensive follow-up of a subsample of the non-respondents were attempted again.

1.5 Weighting Procedures

Samples have been drawn using Simple Random Sampling (SRS) techniques. Accordingly samples were drawn from each ISIC category (or sub-category as the case may be) in Male' and Addu. In respect of Resort industry sub-group, samples were drawn from the concerned sampling frame without making any sub-stratification.

Before drawing samples "sample size" was fixed using appropriate statistical procedure ensuring certain level of precision.

The Table S1 below gives the details of Sampling frame and size of sample drawn for the survey according to ISIC categories /sub-category.

Table: I Distribution of sample size across sectors, regions and industry sub-group

ISIC category/ sub-category	Male'		Addu City		Resorts	
	Size of Sampling Frame (N)	Samples drawn (n)	Size of Sampling Frame (N)	Samples drawn (n)	Size of Sampling Frame (N)	Samples drawn (n)
(1)	(2)	(3)	(4)	(5)	(6)	(7)
A - Fisheries and Agriculture (Div 01)			49	44		
A - Fisheries and Agriculture (Div 03)			31	29		
C - Manufacturing	392	183	34	32		
D - Electricity, Gas	CENSUS SECTOR ONLY					
E - Water, sewerage, waste	CENSUS SECTOR ONLY					
F - Construction	121	85				
G - Trade	2,333	272	208	135		
H - Transport	66	55				
I - Accommodation and food service activities (excl. Resorts)	454	168				
I - Accommodation and food service activities (Resorts)					100	80
J - Telecommunication	47	40				
K - Financial services	CENSUS SECTOR ONLY					
M - Professional services	284	147				
N - Administrative and support service	228	133				
P- Education	71	55				
Q - Health and Social services	74	61				
R - Recreation	29	27				
S - Other services	191	128				
Total	4,290	1,354	322	240	100	80

Census Sector: As mentioned earlier that the Establishment Survey is a mix of two sectors namely, Sample Sector and Census Sector. It is therefore worthwhile to see the size of establishments in each sector/sub-sector. The Table below gives the details of Census Sector:

Table: II Distribution of Establishments in the Census Sector

ISIC category/ sub -category	Male'	Addu City	Atolls	Financial Intermediaries
A(Div 01)	6		204	
A(Div 03)				
C	16	1	118	
D	10	2	6	
E	8		1	
F	18	6	15	
G	60	2	601	
H	8	1	6	
I (excl. Resorts)	51	18	77	
I (Resorts)		SAMPLE SECTOR ONLY		
J	12	8	5	
K	20	2	1	20
M	25	4	9	
N	18	8	9	
P	17	7	41	
Q	6	2	5	
R	2	0	3	
S		10	59	
Total:	277	71	1160	20

Estimation Procedure

The following notations are used:

i = subscript for i -th stratum based on ISIC categories.

k = subscript for k -th sample /establishment under a particular stratum

1 = stands for Sample sector of Male', 2 for Addu and 3 for Resort.

1N_i = total number of Units /Establishments **in the sample sector** in the i^{th} -stratum of Maldives

1n_i = number of establishment selected for survey out of total number 1N_i **in the sample sector** in a stratum

1W_i = Multiplier (weights) for the i^{th} stratum (=ISIC category/sub-category) for Maldives.

Let, ${}^1X_{ik}^s$ = observed value of characteristics X (*say X= no. of workers*) of the k^{th} sample unit in the i^{th} Stratum in respect of the s^{th} sector that is in Sample sector for Male'. With similar notations we can denote ${}^1X_{ik}^c$ = observed value of characteristics X (*say X= no. of workers*) of the k -th sample unit in the i^{th} Stratum in respect of the s^{th} sector that is in Census sector for Male'.

Then the estimate of Total worker in the in the i^{th} Stratum of the Sample sector for Male = $\sum {}^1W_i {}^1X_{ik}^s$ (summation is over $k = 1, 2, 3, \dots, {}^1n_i$).

The estimate of the parameter "X" for the Sample sector of Maldives will be= $\sum {}^1X_i^s$

(Summation is over all stratum level estimates)

The total estimated workers in Male = $\sum {}^1W_i {}^1X_{ik}^s + \sum {}^1X_i^s$

Computation of Weights

For Sample sectors we have computed weights or/Multipliers as below:

Using the notations above we find the probability of a unit getting included in the sample for i^{th} ISIC sector of Male' (say) is

$${}^1P_i = {}^1n_i / {}^1N_i$$

Then presuming there will be no case of non-response /deletion etc. the weight or multiplier will be

$$= 1 / {}^1P_i = {}^1N_i / {}^1n_i$$

But in reality all the sampled units may not provide data or even there may be case of mis reporting of ISIC codes at the time of listing operation and corrected subsequently. Thus, the above weight needs correction. We therefore call the above weight as Base weight for i^{th} stratum for Male'

$${}^1W_{(base)i} = {}^1N_i / {}^1n_i$$

Where,

1N_i = total number of Units **in the sample sector** in the i^{th} stratum of Maldives

1n_i = number of unit selected for survey out of total number 1N_i

Similarly, we can compute base weights for Addu and Resorts.

All establishments that do not respond, irrespective of the reasons for non-response, are treated as non- response and are used for weight adjustment. Similarly adjustments are needed for "sample size surveyed" due to addition of units originally selected under one stratum but undergone intra-transfer within sampling sector after correction of Frame ISIC codes. Inverse response rate is used for such adjustment as

$${}^1W_{(adj)i} = (\# \text{ of sample in the } i^{th} \text{ stratum}) / (\# \text{ of units responding in the } i^{th} \text{ stratum})$$

The final weight after the non-response adjustment for establishment is:

$${}^1W_{(fin)i} = {}^1W_{(base)i} \times {}^1W_{(adj)i}$$

The final weights or Multiplier for Addu and Resorts namely, ${}^2W_{(fin)i}$ and ${}^3W_{(fin)i}$ could be worked out similarly.

CHAPTER II

Concepts & Definitions

CONCEPTS AND DEFINITIONS

Some items of the questionnaire are identical for all sectors while filling in the questionnaires. These items are defined and explained below.

Establishment

An establishment is an enterprise or part of an enterprise that is situated in a single location and in which only a single (non-ancillary) productive activity is carried out or in which the principal productive activity accounts for most of the value added.

Industry

An industry consists of a group of establishments engaged in the same or similar kind of production activity. The industries are classified according to the productive activities as per the ISIC classification (Rev.4)

Ancillary Activity

An ancillary activity is a supporting activity undertaken within an enterprise in order to create the conditions within which the principal or secondary activities can be carried out. Ancillary activities generally produce services that are commonly found as inputs into almost any kind of economic activity and the value of an individual ancillary activity's output is likely to be small compared with the other activities of the enterprise (e.g. cleaning and maintenance of buildings).

Production

Production is the activity in which an establishment uses inputs to produce its outputs. Production is the process whereby, land, labour, capital and raw materials are transformed into goods and services.

Gross Value Added (GVA)

GVA = output less intermediate inputs (intermediate consumption)

Gross Value added is the value of output less the value of intermediate consumption. It is a measure of the contribution to GDP made by an individual producer, industry or sector. This is the additional value generated by the factors of production; or the additional value created by a process of production.

Output - goods and services that are produced with the intermediate consumption

Intermediate consumption - goods and services that are consumed or used in the production process

Output

Output is the goods and services that are produced with the establishment that become available for those outside the establishment and any good and services produced for own final use.

Intermediate Consumption

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production (excluding fixed assets whose consumption is recorded as consumption of fixed capital). These goods and services may either be transformed or used up by the production process.

Durable goods which may be classified as capital goods since they are used as the tools of production over a number of years (saws, spades, knives, axes, hammers and screwdrivers etc.) may be included in intermediate consumption if their prices are below a certain low value.

Intermediate consumption excludes other production costs such as labour cost, financial costs and production taxes.

Accounting Period

The questionnaire refers to calendar years. For ES 2012/2013 the aim was to take data for the year 2011. As the accounting year differs for different establishments it was not possible to collect data for some cases.

In case the accounting year of the establishment differs from the calendar year, select the accounting year with the largest coverage in the mentioned period. For instance, if an establishment's accounting year is from the 1st of April 2011 to the 31st March 2012 of the following year, report it in the starting year of the accounting period. For accounting years running from 1st July 2011 to 30th June 2012 it is recommended to report for the year ENDING (2012) in the calendar year referenced.

Also the establishment could choose to provide data for the last month as for small establishments that do not maintain proper books of accounts it will be difficult to provide for the last year.

Income

Income is the money that an individual or business receives in exchange for providing a good or service or through investing capital.

Expenditures

Expenditures are the values of the amounts that buyers pay, or agree to pay, to sellers in exchange for goods or services that sellers provide to them or to other institutional units designated by the buyers.

Net Worth

Net worth is the value of all the non-financial and financial assets owned by an institutional unit or sector less the value of all its outstanding liabilities. It is a measure of the wealth of a unit or sector at one point in time.

Capital Transfers

Capital transfers are transactions in which the ownership of an asset (other than cash and inventories) is transferred from one institutional unit to another, in which cash is transferred to enable the recipient to acquire another asset or in which the funds realized by the disposal of another asset are transferred.

Other changes in the volume of assets

The other changes in the volume of assets are the changes in assets, liabilities, and net worth between opening and closing balance sheets that are due neither to transactions between institutional units, as recorded in capital and financial accounts, nor to holding gains and losses.

Real holding gains or losses

Positive or negative holding gains may accrue during the accounting period to the owners of financial and non-financial assets and liabilities as a result of a change in their prices (holding gains are sometimes referred to as “capital gains”)

Fixed Assets

Fixed assets are tangible or intangible assets produced as outputs from processes of production that are used repeatedly or continuously in other processes of production for more than one year. (eg. Machinery, equipment etc)

Casual Workers

Employees who work without a contract or who have a contract of short duration (defined as six months or less)

CHAPTER III

Key Findings

INTRODUCTION

In order to provide detailed results of the ES2012-13, a series of core Tables have been generated which are placed at the end as Annexures. It may be noted that for most of the cases there is a set of four Tables under each Title. The first table of any such set presents the data of Maldives as a whole. The second one is for Male', third one is for Addu and the fourth one is for selected Atoll islands.

It may be worth mentioning that no attempt has been made to compare the results of this survey with that conducted in 2007-08, in view of major difference in the scope and coverage between the two surveys. The major difference is due to exclusion of the household sector and unregistered sectors completely during ES 2012-13.

In this Chapter, the economic activities according to 2-digit of ISIC industries are analyzed based on the principal characteristics. The principal characteristics which are used in the core tables attached in the Annex are:

- a) Number of establishments; b) Details of Employment according to Maldivians and Foreigners with Female-Male break ups; c) Output; d) Input; e) Gross Value Added; f) Depreciation; g) Net Value Added; h) Fixed Capital; i) Operating Receipts j) Operating expenditure; k) Rent Paid; l) Interest paid; m) Profits.

For further analysis, for the first time JO-HARI Window analysis has been taken up in respect of the following Principal Characteristics namely, Fixed Capital, Output, Input and GVA.

Analysis based on technical coefficients to measure the performance of various ISIC based industries are carried out to gauge the productivity. The technical coefficients computed are:

- a) Fixed capital per establishment b) Workers per establishment according to Female-Male break up c) Remuneration per Worker d) Output per establishment e) GVA per worker f) Output per worker g) Fixed Capital per worker h) Fixed capital to GVA i) Output to Input and j) Output to remuneration.

Corporate sector plays an important role in the economy. It will therefore be of immense importance to examine the performance of this sector covered within the scope and coverage of this study using some selected key-indicators.

Like previous Establishment survey report, table has been generated on distribution of establishments by Industry and legal status. For the first time an attempt has been taken up to measure the performance of OAE (Own Account Enterprise) sector of the economy.

It is needless to mention that the OAE is most prominent within the household sector, but for country like Maldives where organisations under Individual proprietorship type are very common, it may be worthwhile to study this sector from employment potential point of view. Another important Table which has been introduced is on *unpaid work* along with sex-wise distribution of women empowerment. Keeping this in view an additional table has been added to understand women empowerment among Maldivians and Foreigners,

In order to highlight the importance of Resorts in the economy which contribute significantly in the GDP, it has been decided to divide ISIC category “I” into two sub-categories namely, ISIC I (excluding Resorts) and “Resorts”. In all major Tables we have provided the data according to two sub-categories and as such, no separate Table of Resorts sector has been generated.

In order to understand the male-female divide in Maldivian economy, distribution of employees according to sex has been computed and presented. Since a sizable number of foreigners are working in Maldives, special care has been taken to provide break up Maldivian and Foreigners in labour market.

Establishments based on Principal Characteristics

Tables 1.1A to 1.4B provide Principal Characteristics wise distribution of Industries. There are 6,143 establishments (estimated) within the scope and coverage of the present survey. The percentage share of a) no. of establishments b) employment c) Remuneration c) GVA and d) Operating Receipts according to ISIC categories are summarized below in Table S4.

Table S4: Distribution of Establishments according to ISIC categories

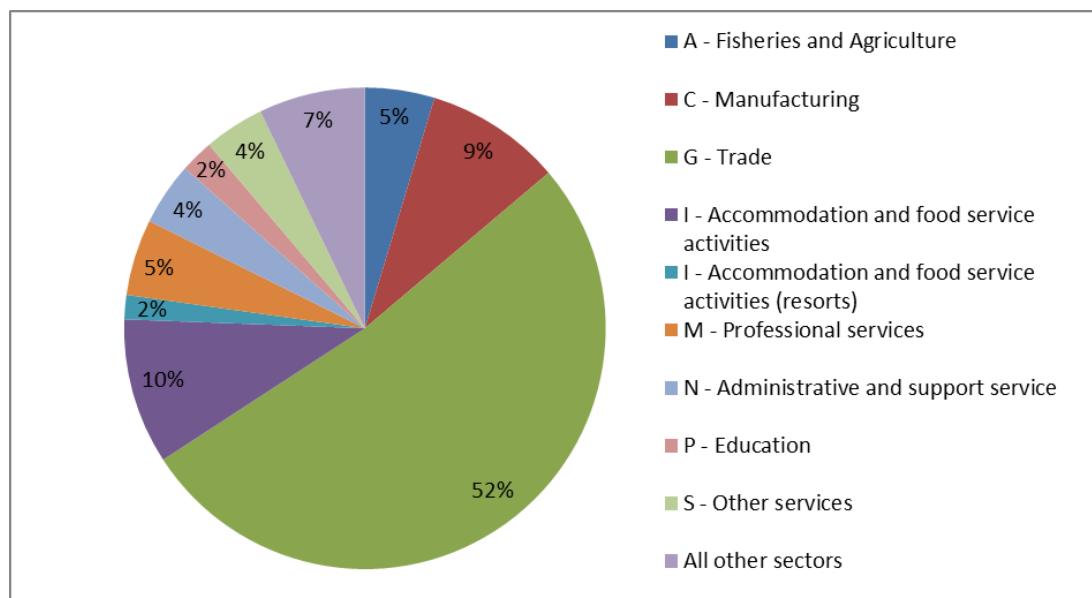

ISIC Categories	% Share of Establishment	% Share of Total Employment	% Share of Remuneration	% Share of GVA	% Share of Operating Receipts
A - Fisheries and Agriculture	4.67	2.21	2.51	0.37	0.30
C - Manufacturing	9.15	3.26	2.31	1.00	0.88
D - Electricity, Gas	0.18	0.46	3.05	4.81	3.10
E - Water, sewerage, waste	0.03	0.02	0.01	0.00	0.00
F - Construction	2.57	9.09	5.98	4.05	4.37
G - Trade	51.99	20.54	13.33	32.48	31.37

H - Transport	1.42	1.09	1.09	0.55	0.49
I - Accommodation and food service activities	9.78	7.67	4.28	4.34	3.12
I - Accommodation and food service activities (Resorts)	1.63	36.07	43.10	22.44	23.25
J - Telecommunication	0.93	1.59	1.89	0.54	0.69
K - Financial services	0.02	0.01	0.01	0.00	0.00
M - Professional services	5.13	6.26	13.84	19.73	25.48
N - Administrative and support service	4.22	4.26	3.92	5.25	3.81
P - Education	2.23	3.46	1.82	0.30	0.24
Q - Health and Social services	1.45	1.56	1.42	0.60	0.44
R - Recreation	0.55	0.93	0.61	1.91	1.41
S - Other services	4.05	1.53	0.81	1.63	1.05

Number of establishments

The ISIC sector trade (G) has largest number of establishments. Out of estimated 6,143 establishments in total 4,507 (73.4%) are located within Male' itself followed by eight Atoll Islands with a share of 18.7%. The overall contribution of no. of establishments expected to be much more had all the Atoll-Islands been included within the scope of this study.

Figure 4.1: Contribution of GVA by ISIC

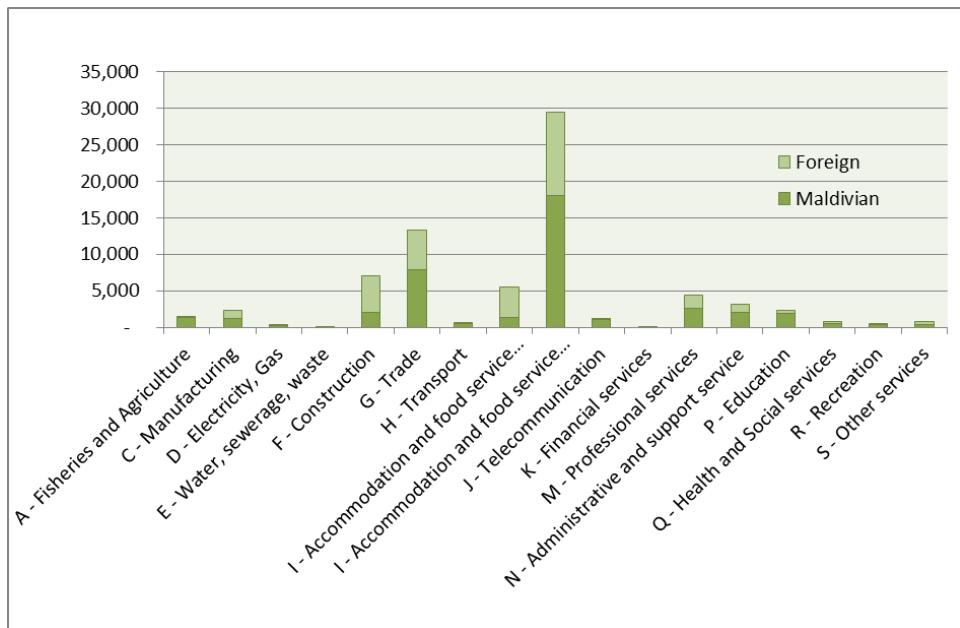

4.2.2 Gross Value Added (GVA)

As seen from Figure 4.1 above, in respect all five parameters, ISIC G (trade), I (resorts) and M (Professional services) provide highest share in GVA – again within the scope and coverage of this study only. Wholesale and Retail Trade including repairing of motor car and motor cycles (G) provide largest share in terms of size of establishment (51.99%) and has largest contribution of GVA (32.48%) in respect of a single ISIC tabulation category. The total contribution of top most three ISIC sectors stands at 79% of GVA. The share of ISIC sectors Electricity (D), construction (F) and Administrative and support service (N) are moderate and contribute only 14.11% in the GVA.

4.2.3 Number of workers

The Resorts industry is the single most economic activity which provides highest no. of employment of 36.07%. This sector provides employment 35.76% to foreigner and 36.27% to the Maldivians. The two most important sectors which provide largest employment to Maldivians and also to foreigners are Sector G (Trade) and I (including resorts) which contribute more than 64% of total employment.

Table S-1 Distribution of Establishments according to ISIC categories

Out of total estimated employment of 73,020 *paid employees*, 40.26% got jobs in the Resorts. Next to this is ISIC G - Trade (18.25 %) followed by ISIC sector F - construction (9.67%) and ISIC I - Hotels and restaurant (excluding Resorts) (7.64%). Among Maldivians, Resort sector provide 43.77% of paid employment whereas the corresponding figure for foreigners is 35.75%.

4.2.4 Fixed capital

The Top three ISIC sectors which received high investments in the form of Fixed Capital are: Resorts (77.02%), Trade (G) (6.19%) and Electricity (D) (5.68%).

4.3 Employment size

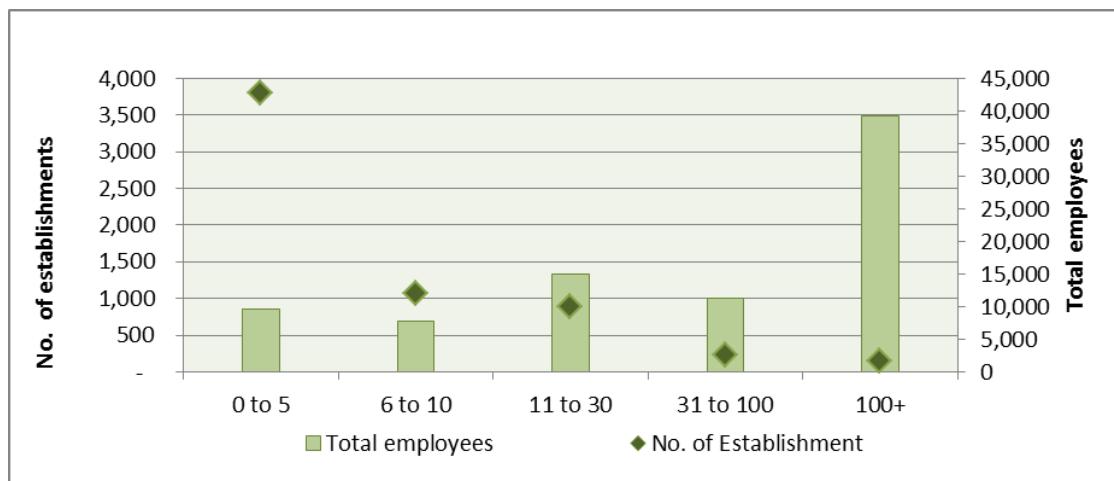

Tables 3.1A to 3.4B are most important ones in order to understand structural pattern of establishments in Maldives. Distribution of structure of industries is very much dependent on the size of employment and the Table 3.1A provides the employment size-wise distribution of industries. The "employment size classes" used are, 0-5, 6-10, 11-30, 31-100 and 100+.

Table S5: Distribution of key parameters according to employment size classes

Size of Employment	No. of Establishment	Total Employment		Total Remuneration in MVR	Gross Value Added in MVR
		Female	Male		
0-5	3,808	1,483	8,132	60,863,329	1,016,599,624
6-10	1,072	1,027	6,800	45,643,959	704,004,616
10-30	895	1,443	13,591	104,395,701	1,860,178,831
31-100	224	1,184	10,175	120,876,062	1,011,392,947
100+	144	2,044	37,201	344,421,126	2,069,682,120
Total:	6,143	7,181	75,899	676,200,176	6,661,858,138

The Table S5 above shows that it is very apparent that the distribution of establishments are highly concentrated in the employment size groups 0-5 and 6-10 having a share of 79% of establishments. Interestingly these 79% of the establishments absorb only 21% of employment and contribute 26% of GVA. These two groups basically belong to "informal sector" and remuneration per worker is below average. In fact these two employment size groups contribute only 16% of remuneration. It will not be surprising to see that the fixed capital invested in these two groups have a share of 8% only. Similarly, it is not unnatural to find more "female workers" in the informal sector. Among all "female workers" across all employment size groups, 35% of "female workers" are found employed in Informal sector. The corresponding figure for "male workers" is 20% only. There is a high concentration of "female workers" within first two size classes with respect to total female workers in Maldives. Within the size class "0-5", there is 85% "male workers" and the corresponding figure for the group 6-10 is no different and it stands at 87%. The Male-female divide is therefore very prominent in the Maldivian economy.

Figure 4.3: Number of establishments and employment according to employment size

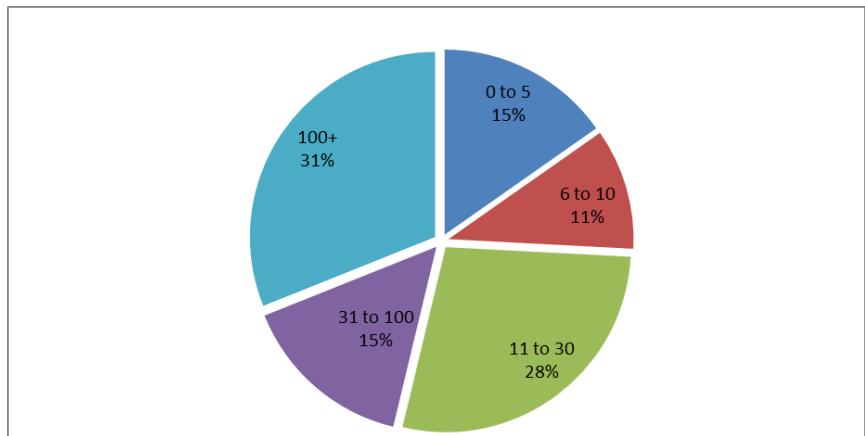

According to ISIC heads, ISIC G (Trade) contributes substantially in the informal sector followed by ISIC I (excluding Resorts). Moderate contribution comes from ISIC categories A (Fisheries and Agriculture), C (manufacturing), F(Construction), M (Professional services), and N (Administrative and support service) & S(Recreation). It is also clear that there is a strong presence of Informal employment across all ISIC sectors in the Maldivian economy including Resorts sector which otherwise belongs to Corporate sector

“Resorts sector” is an important sector of the Maldivian economy. With only 2% share of establishment, this sector provides employment of 50% and GVA of 22%. The employment class “100+” itself contributes about 45% employment. It is observed that 2% of establishments contribute 43% of remuneration. The following Table S6 shows Percentage share of key-indicators for Resorts:

Table S6: Percentage share of key-indicators for Resorts sector:

Employment	No. of Establishment	Total Employment		Total Remuneration in MVR	Gross Value Added in MVR
		Female	Male		
0-5	0	0	0	0	0
6-10	0	0	0	0	0
11-30	0	0	0	0	0
31-100	3%	0%	6%	5%	2%
100+	64%	41%	77%	83%	71%
Total:	2%	12%	38%	43%	22%

Figure 4.4: Percentage share of GVA according to employment size

4.4 Analysis of operating receipts

Tables 4.1A to 4.4B provide Operating receipt (OR) size-wise distribution of establishments and other key parameters. Analysis of distribution of various parameters across all ISIC heads shows an increasing trend across OR classes. The highest group namely, 100,000+ contributes 56.4% of establishments with 98.6% of Fixed Capital and 99.7% of GVA. But across sixteen (16) ISIC groups under study, no such trend is noticed. In case of ISIC A(Fisheries and Agriculture), 39% of establishments belong OR group 1000-9999 with 40% female employment, whereas the highest OR group “100,000+” provides 47% female employment. An overview of results across all ISIC heads, it is observed that share of female workers as percentage of total employment in the highest OR group varies between 0% (ISIC K) to 50.5% (ISIC P) registering an average employment of 7.6%.

Figure 4.5: Number of establishments and employment according to Operating Receipts

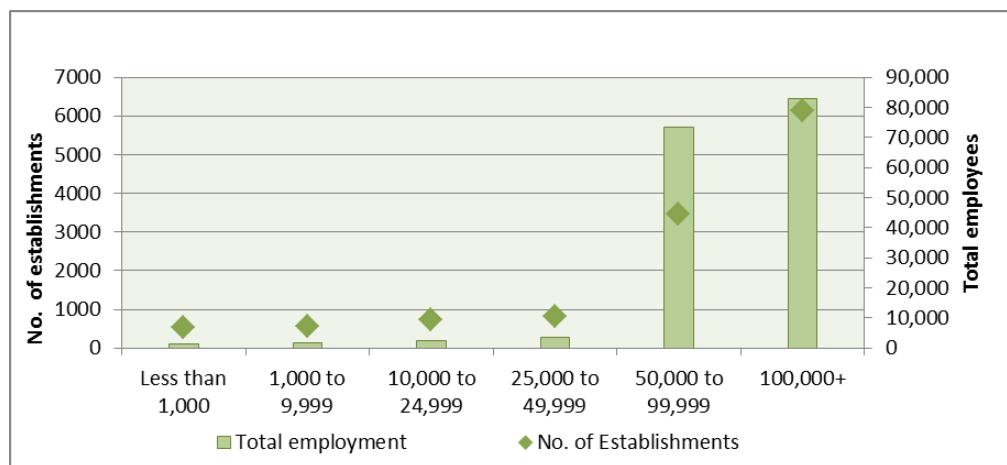

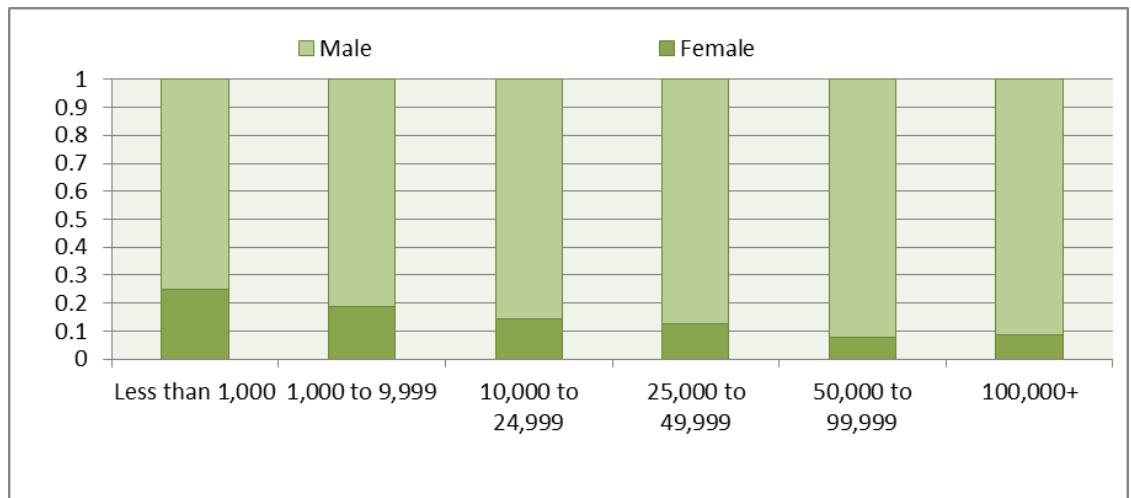

Figure 4.6: Percentage share of male/female according to Operating Receipts

4.5 JO-HARI Window Analysis

Taking four important parameters namely, Fixed Capital, Output, Input and GVA, JO -HARI Window analysis have been carried out. Table 5.1 provides the detailed results for the country as a whole and Tables 5.2 to 5.4 provide Island-wise break ups. In case of Male' and Maldives as a whole, more than 50% share of all the parameters lie above the mid-line of JO-HARI Window. The overall pattern of industrialization is not homogenously distributed. The situation is just reverse in respect of Addu and Atoll islands. It may be noted that Resort sector has been kept outside the purview of JO-HARI analysis.

Nine indicators have been chosen for measuring the performance of the industries according to ISIC Classes namely, Fixed Capital per Establishment, Workers per Establishment according to female-male break up, Remuneration per Worker, Output per Establishment, GVA per Worker, Output per Worker, Fixed Capital per unit of GVA, Input-output ratio and, Output per unit of remuneration. Table 6.1 provides detailed result for Maldives and tables 6.2 to 6.4 for the group of Islands.

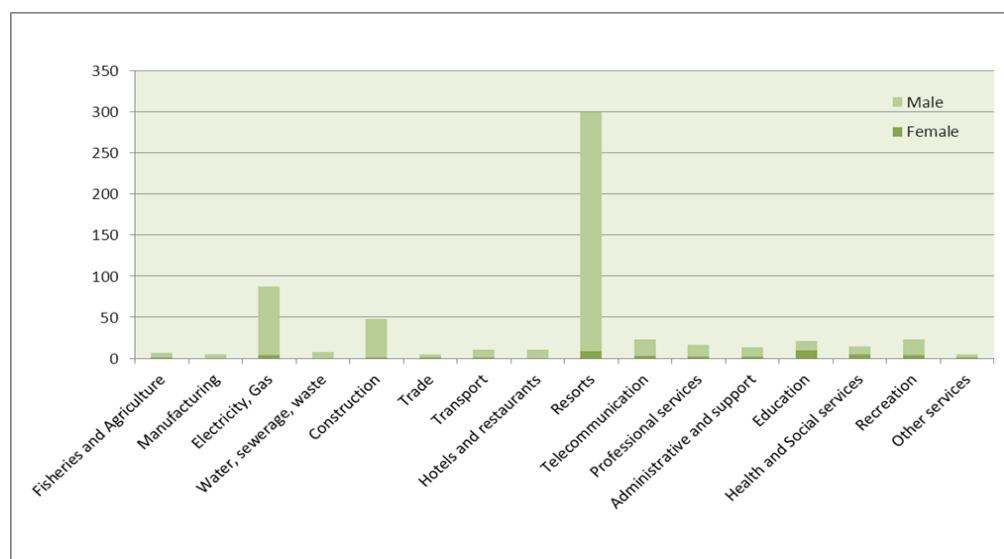

4.5.1 Fixed Capital per establishment

Based on Fixed Capital per establishment, the most capital intensive industries are ISIC D (Electricity, gas, steam and air conditioning supply) and Resorts (part of ISIC I). Besides these two, the only sector where this ratio is found to be above average is ISIC R (Arts, entertainment and recreation). Least capital intensive industries are ISIC K (Financial services), S(Other services), E(Water, sewerage, waste), P (Education), and A(Fisheries and Agriculture) & G(Trade).

4.5.2 Workers per establishment

Based on Workers per establishments, the female-male divide is very clear from the results. There is very poor women employment in all sectors except ISIC P (Education), I(Accommodation and food services) and Q (Health and Social services). The average of employee per establishment is just 1 (one). On the other hand, the average male workers stands at 12 and varies from 4 (ISIC S) to as high as 291 (Resorts). Among other man-intensive industries mention may be made of ISIC F (Construction), D (Electricity), and J(Telecommunication) which employ more male workers.

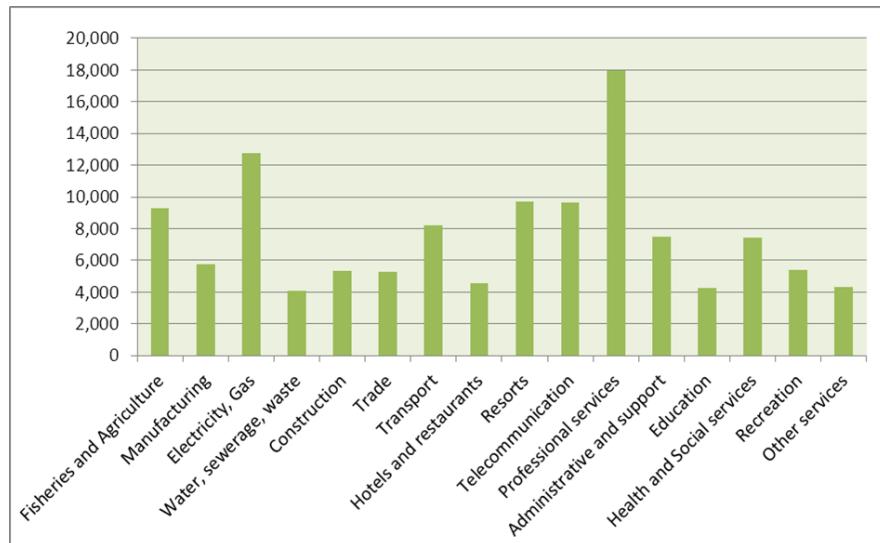

Figure 4.7: Number of workers per establishment by sex and ISIC

4.5.3 Remuneration per worker

Remuneration per worker for each industry was computed and comparison was done based on the mean remuneration per worker. There are ten industries where the remuneration (monthly) is found to be less than MVR 7,500. According to the study ISIC D (Electricity) provides the best remuneration. The average remuneration in Resorts is estimated at MVR 9,725 only which is much above the average rate. However, if the remuneration in kind food and accommodation services provided to the workers working in the resorts were valued, the total remuneration would be higher than any other sector. The share of remuneration for Resorts is 43.10 %. Next to Resorts, ISIC A (Fisheries and Agriculture), J (Telecommunication) provide better remuneration.

Figure 4.8: Remuneration per worker by ISIC, in Rufiyaa

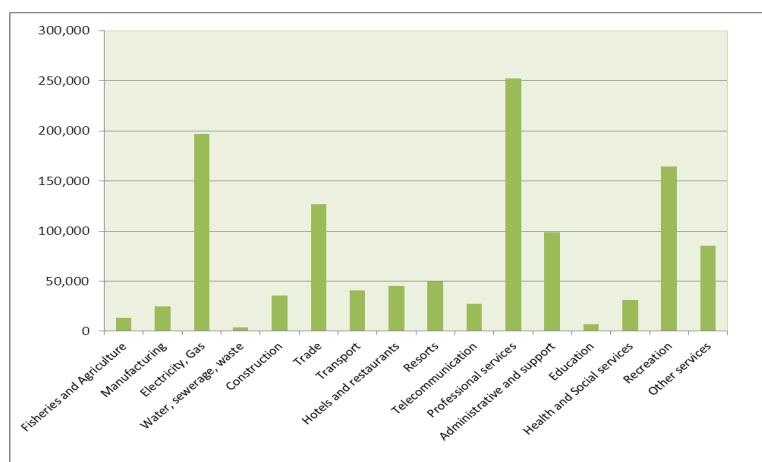

4.5.4 Output per worker and per establishment

The sectors where Output per establishment found to be very impressive are ISIC D (Electricity), I (Resorts) and M (Professional services). The first two industry sectors are highly capital intensive. While ISIC M (Professional services) with moderate fixed capital provide better turnover. On the other hand, worker-efficiency is much better in respect of ISIC D (Electricity), M (Professional services), R (Recreation), and G (Trade) & N (Administrative and support service) as compared to other industries including Resort sector.

4.5.5 GVA per worker (labour efficiency) and Fixed Capital to GVA

ISIC D(Electricity) consistently shows better performance in respect of all parameters including GVA per worker with moderate Fixed Capital-GVA ratio. The other labour-efficient industries are ISIC G (Trade), M (Professional services), R (Recreation), N (Administrative and support service) and I (Resorts). In view huge cost of infrastructure development in Resorts, the Fixed Capital-GVA ratio comes out very high- rather highest among all industries.

Figure 4.9: Gross Value Added per worker by ISIC, in Rufiyaa

4.5.6 Output-Input ratio

Higher Output-Input ratio helps for achieving industrial growth. ISIC G (Trade) is the best sector as per this study with 12.17 as Output-Input ratio. Next to it are ISIC R (Recreation) & S (Other services) which show better performance. Overall distribution of Output-Input ratio is quite satisfactory.

4.5.7 Output-remuneration

In case of ISIC M (Professional services), it is found that better remuneration has yielded better output. This is also true for ISIC D (Electricity, Gas). But there are industries which produce higher outputs even with very moderate remuneration namely, ISIC R (Recreation), S (Other services), G (Trade) and N (Administrative and support service). In case of Atolls and Addu, one may find many such industries.

4.6 Performance of Corporate Sector

Corporate sector is taken as the driver of economic growth and therefore an analysis of performance of corporate sector is very important. Tables 7.1 to 7.4 provide corporate sector data. The scope and coverage of this study is limited since entire corporate sector is not covered in the present study.

Out of 6,141 estimated establishments, 35% establishments belong to the corporate sector within the scope and coverage of this study. This 35% of the establishments account for 76.53% of GVA and 72.67% of total employment. In order to measure the performance of this sector, five important technical ratios have been chosen and the results are presented below along with similar technical ratios for the entire Maldivian economy.

Table S7: Performance measured through Technical Coefficients

Technical Ratios	Performance		Remarks
	Corporate Sector	Entire economy	
Worker per Establishment	28.04	13.60	More than double size of employment
Remuneration per Worker	8,303	7,977	Marginally better remuneration
Fixed Capital per Establishment (MVR)	14,512,726	5,466,933	Highly capital intensive
GVA per establishment (MVR)	2,367,650	1,059,986	Impressive contribution to the Maldivian economy
Output/Input	3.32	2.71	Efficient management of resources

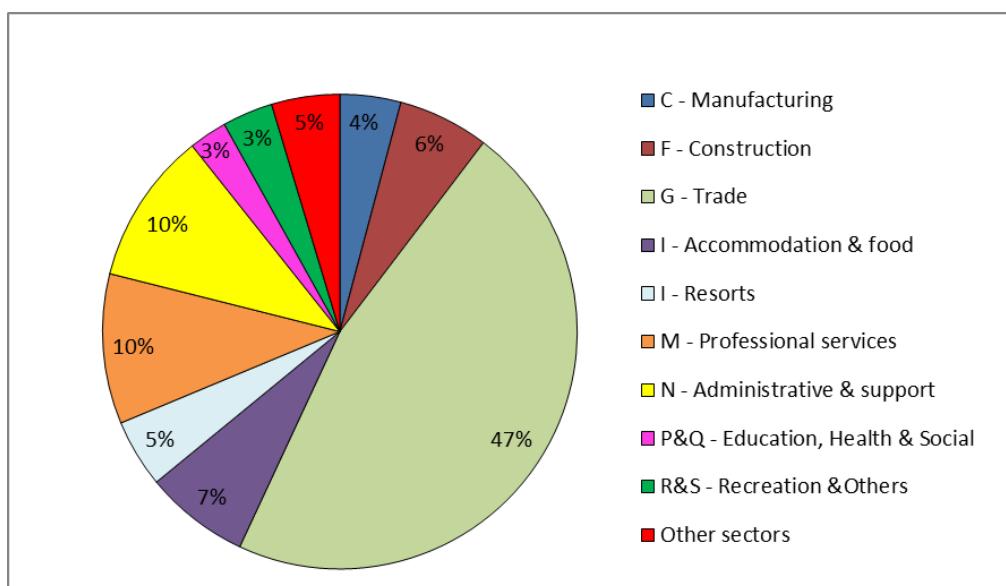

The ISIC G (Trade) continues to produce high Output-Input ratios in corporate sector also followed by ISIC I (accommodation and food). Most Capital intensive industries are ISIC D (Electricity, Gas) and Resorts. In respect of GVA per establishment, Resort sector tops the list followed by ISIC R (Recreation), D (Electricity, Gas) and M (professional Services). Among Islands, Male' accounts for more than 93% of establishments of the corporate sector have more than 70% share of GVA.

Table S8: Distributions of Establishment and employment in Corporate Sector

Indicator	Atolls	Addu city	Male'	Republic
<i>Establishment</i>	26	24	2,004	2,153
<i>Employment</i>	127	310	29,972	60,373

Figure 4.10 shows the percentage share of the number of establishments in the corporate sector by ISIC categories. In terms of the number of establishments in the corporate sector, trade industry dominates as 47% of the establishments in the corporate sector are engaged in trading activities.

Figure 4.10: Share of establishments in corporate sector by ISIC

4.7 Distribution of Own Account Enterprises

Maldives being consisted of large number of Islands, it is not surprising that there could be a sizeable number of establishments outside household sector which are run by the owners without having any regular paid employees. Based on the current study, it is found that 12.6% are run by the owner without having any regular paid employee.

Table S9: Distributions of Establishment and employment in own account enterprises

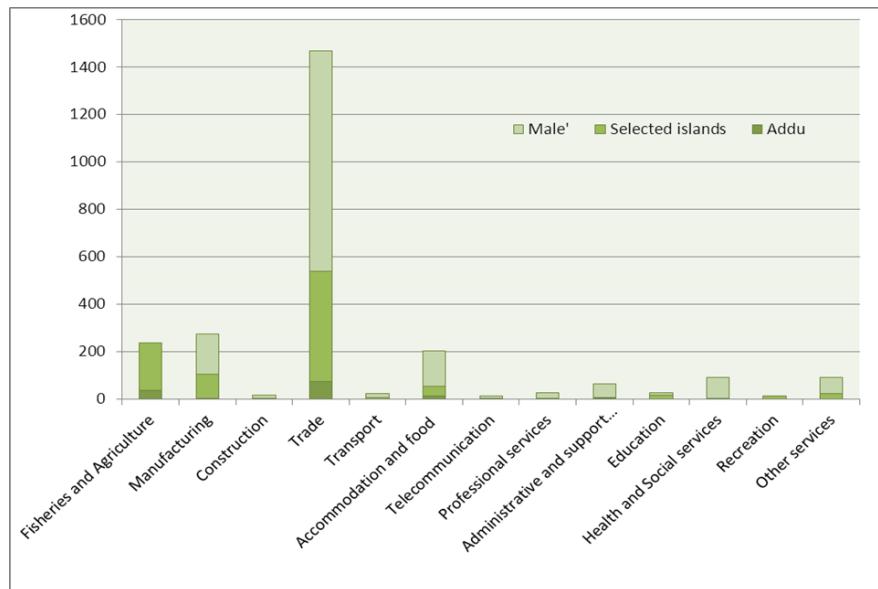

<i>Indicator</i>	<i>Atolls</i>	<i>Addu city</i>	<i>Male'</i>	<i>Republic</i>
<i>Establishment</i>	365	127	282	775
<i>Employment</i>	820	160	1198	2178

The importance of OAE does not lie about its contribution to GVA (of about 0.6%) but for giving scope for employment to the semi-skilled workers – mostly women living in Atolls. It is observed that out of 7,181 women workers, as estimated, about 7% belong to OAE. The share of men workers is just 2.2% out of 76,369 workers estimated. Atolls have 365 OAE which accounts for 47% of total OAE followed by Male' which accounts for 36.4%. In respect of Fixed Capital, OAE sector needs very little investment of fixed capital and this is apparent in case of Maldivian economy also. The 775 Own Account Enterprises, as estimated, have invested only 0.2% of total fixed capital.

4.8 Distribution of unpaid worker outside household sector

The impact of unpaid workers often remains invisible in the Statistical report although these workers contribute in the economy in many ways. The Table 9 provides the distribution of unpaid workers, outside the household sector, in Maldives. Most often, family workers work as an unpaid worker in the Own Account Enterprises of the Head of household. This picture may not be different for Maldives. As seen earlier, there are 775 establishments belong to OAE sector having 2,178 workers. On the other hand, the size of unpaid workers is estimated at 2,547. There could be some unpaid workers outside OAE sector also. It is observed that out of estimated 2,547 unpaid workers, 60% belong to Male' followed by 35% in selected islands and the rest (5%) are located in Addu. This has just 16% OAEs.

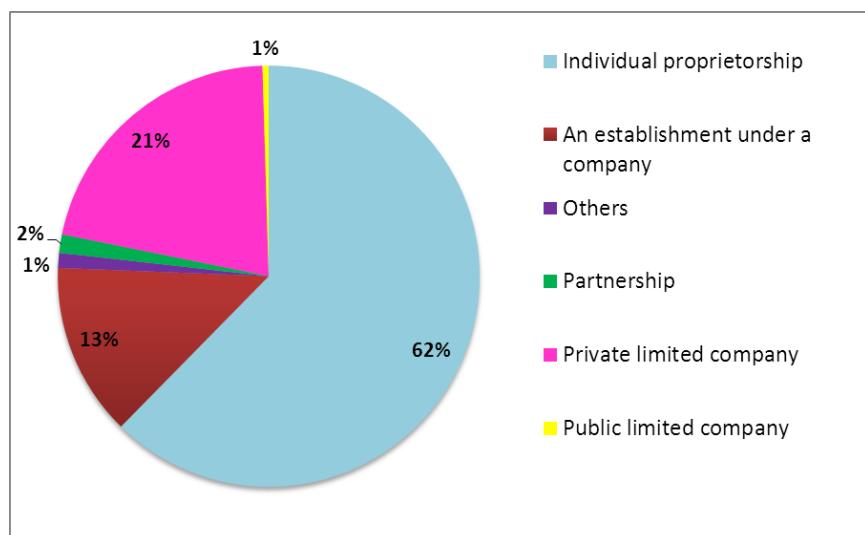

Figure 4.11: Distribution of unpaid workers by ISIC

4.9 Distribution of industries by type of legal organizations

Individual proprietorship constitutes 62 % of the establishments followed by Private limited Companies (21.34%) and Establishment under Company (13.27%). Rests are under the categories of Partnership, Public limited company, Cooperative Society, international organization, NGO and others. In case of Male', 52.98% establishments are under Individual proprietorship followed by Private Limited Company (27.18%) and 16.71% are under a Company. In case of Addu where ISIC activities like A (Fisheries and Agriculture), C (Manufacturing) and G (Trade) are very common, 93.49% of the establishments are under individual proprietorship. The pattern of type of organisations in Atolls is no different than Addu.

Figure 4.12: Distribution of industries by type of organisations

4.10 Sex-wise distribution of Workers

After the Beijing Platform of action (1995), it has become necessary to study the inequality among male and female workers in a country. The Table 11 gives the distribution of employees according to sex of foreigners and Maldivians. Based on this study it is observed that there is serious inequality among male-female employment. For each female worker, there are 10.63 male workers. But such inequality is marginally less among Maldivian workers and this stands at 7.07 male workers. The inequality is highest in case of Resorts sector followed by ISIC D&E (Electricity and Gas). In resort sector for each female worker, there are 56 male workers. However, in case of ISIC P (Education) the picture is opposite and the ratio stands at 1: 0.95 – means there are more women employees than men. Next to ISIC P (Education), the ISIC Q (Health and Social services) is also gender responsive with female –male ratio at 1:1.46 among Maldivian workers.

CHAPTER V

Resorts Sector Analysis

ANAYLYSIS OF RESORTS SECTOR

5.1 Introduction

Being socio-economic phenomenon, tourism acts both as an engine of economic development and a social force, impacting a wide range of industries. Importance of tourism sector to the Maldivian economy is explained by a plain fact that it accounts more a third of its GDP. Tourism comprise a number of activities such as resorts, hotels and restaurants, sports and recreational activities, transportation and services of travel and tour operating agencies. Ministry of Tourism, Arts and Culture maintains statistics of tourist arrivals and bed-nights. Based on the bed-nights statistics of November 2014, 94 percent of the tourist bed-nights are from the resorts. This highlights the importance of analyzing the resorts sector. The services and production activities in the Maldivian resorts are exclusively targeted to serve international tourists.

ES 2012/2013 had a separate questionnaire designed for data collection of resorts, hotels and restaurants services. This allows a closer economic analysis of the sector including the details of the outputs and inputs of the sector and this chapter provides a closer look on the results on ES 2012/2013 pertaining to resorts.

5.2 Coverage of resorts

ES 2012/2013 was designed to collect data of the accounting year 2011. As all the resorts are large establishments, based on the number of employees, (i.e. more than 20 workers), and almost all resorts are in the corporate sector, sample was taken based on the operational resorts in 2011. There were 100 resorts operational in 2011 and the size of sample is 80. However, the response rate of the sector was well below than expected. The response rate for this sector was 39 percent. As each and every resort in Maldives is unique and is heterogeneous, 31 resorts is not sufficient represent the sector.

ES 2012/2013 results for resorts could not provide the total measure, however the number is sufficient to calculate some relative variables that could be used to estimate the major indicators.

5.3 Major findings

5.3.1 Size and number of resorts

The first resorts in Maldives came to in operation in 1972. Since then the number of resorts rose in many folds. Number of resorts operational in 2011 was 100 and currently the number had reached 112 by November 2014. Rapid growth was observed in early 1980's and in the recent years with massive construction of new resorts. The bed capacity of resorts grew even at higher rate than the number of resorts in 2010 and 2011. Thanks to the construction of larger resorts. As shown in the Table S10 below, the average growth rate of the number of resorts and bed capacity in the past five years are 3 percent.

Table S10: Number of resorts and bed capacity, 2010-2014

<i>Indicator</i>	<i>2010</i>	<i>2011</i>	<i>2012</i>	<i>2013</i>	<i>2014</i>
<i>Number of resorts</i>	98	101	105	110	112
<i>Growth rate of resorts (%)</i>	1	3	4	5	2
<i>Bed capacity</i>	21,350	22,12	22,90	23,67	23,921
<i>Growth rate of bed capacity (%)</i>	8	1	7	3	1

Resorts sector attracts substantial foreign investment to Maldives as the value addition is comparatively higher than any other sector. Foreign businesses operate in the sector as leaseholders, operators and management. In 2011, leaseholders of 74 resorts are locals, while foreigners were leaseholders of 12 resorts and leaseholders of 15 resorts were joint ventures.

5.3.2 Employment and remuneration

Being a labour intensive sector, resorts provide employment to persons entering to the labour market for the first time or having difficult to find employment elsewhere. Providing employment opportunities is one of the main macroeconomic objectives of any government. The questionnaire of ES 2012/2013 was designed to collect data required for in-depth analysis of the labour force.

According to ES 2012/2013, 36 percent of all the employment is provided by the resorts sector. The number of employees in the resorts sector is 29,967 and 40 percent of them are foreigners. There were no unpaid family workers working in the sector 1.5 percent of the workers are casual workers. Working directors and supervisory staff accounts for 0.4 percent of the total employment while paid employees are 98 percent.

Table S11: Number of employees and remuneration and average wage

	Maldivians	Foreign	Total
Paid employees	17,989	11,412	29,401
Working directors & supervisory staff	17	91	108
Unpaid family & other workers	-	-	-
Casual Workers	120	338	458
Total	18,126	11,841	29,967
Female	318	512	830
Male	17,808	11,329	29,137
Remuneration ('000)	174,804	116,630	291,434
Average wage	9,644	9,850	9,725

Employment in the resorts is dominated by males as expected with 97.2 percent. Of the 830 females, 38.3 percent is Maldivians and 61.7 percent is foreigners. Resort jobs are less attractive to women as they have to live in resorts, away from family life.

Remuneration includes regular wages, overtime, tips, uniforms and travel allowances, goods and services in kind, such as health care, medical insurance, accommodation, foods and clothing provided free of charge. Resorts sector provides monthly remuneration of MVR 291 million. This is equivalent to monthly average of MVR 9,725 per worker in the sector as remuneration. The monthly average wage of Maldivians is lower than that of foreigners. On average a Maldivian working in the sector is paid monthly MVR 9,644 while a foreigner is paid MVR 9,850. The reason for higher average wage for the foreigners could be because more foreigners working in the upper level of hierarchy as seen in the Table S11. In total, 91 foreigners work as working directors and supervisory staff, this account for 84 percent.

5.3.3 Revenue and its composition

Revenue includes incomes generated for the services provided to the tourists by the resort as well as incomes from all other sources such as property income (dividend, rent, interest). As shown below in Table S 12, when categorized by the source of income, revenues received as hotel and lodging are highest in proportion and accounts for 43 percent of the total. This is followed by revenue generated from sales of food and drink (including mini bar/ catering services) and transportation services which accounts for 40 percent and 7.5 percent of the total revenue, respectively. Returns from dive center, spa etc...; and excursion and sports adds up to 4.9 percent.

Table S12: Percentage share of monthly revenue generated by resorts sector

Source of income	Percentage share (%)
Hotel and lodging services	43
Sales of food and drink (including mini bar/ catering services)	40
Income from transport activities	7.5
Returns on other operations such as dive centre, spa etc	2.5
Excursion and sports	2.4
Retail sales of shops	0.9
Returns on other operations run by third parties	0.7
Returns on operation of resort shops by third parties	0.4
Laundry	0.2
Other incomes	2.4
Total	100.0

5.3.4 Performance of the resorts sector

It is essential to gauge the performance of resorts sector because of its significance to the Maldivian economy. The entrance to the resorts sector is restricted because of the heavy investment required to enter into the business. It attracts most foreign investors and has the highest value of fixed capital per establishment of MVR 267 million. Based on the fixed capital to Gross Value Added ratio, it requires 1.5 years to recover the investment.

Based on ES 2012/2013 on average, a resort employs 299 workers; of which 8 are females and 291 are males, and pays a monthly remuneration of MVR 9,725 per worker.

The monthly average output of a resort is MVR 27 million, which is 2.19 times more than the inputs required to generate that output, indicating efficient management of resources. In terms of output per worker, the industry generates MVR 91,775 and is on average 9.44 times more than the remuneration paid to the employees.

Table S13: Performance of resort sector

Indicator	Performance
Fixed capital per establishment (MVR)	266,647,288
Workers per establishment	299
Female workers per establishment	8
Male workers per establishment	291
Remuneration per worker (MVR)	9,725
Output per establishment (MVR)	27,502,317
GVA per worker (MVR)	49,882
Output per worker (MVR)	91,775
Fixed capital to GVA	17.84
Output to Input	2.19
Output to remuneration	9.44

LIMITATIONS

Economic Surveys are indispensable tool for policy making at macro level as well as micro level. However users should carefully study its metadata to see whether the data will provide evidence before using it for policy or any other purpose. The purpose of this section of the report is to summarize the shortcomings of Economic Survey 2012/2013 in one place even though some of these have been highlighted in other chapters of this report for the benefit of the users as well as to the future survey designers.

Although previously stated in this report, it is worthwhile to mention here the restrictions to the use of the results of this survey that was led by unavailability of a proper sampling frame. The results of this survey are limited to Male, Addu City and the 8 selected islands. As the survey cannot be used to represent the whole Maldivian economy this limits use of its results for policy formulation.

It is worthwhile to state here the sampling bias that was led by the low response rate. While stratification was done to obtain homogeneousness of the establishments engaged in various economic activities the low response rate had been a challenge throughout. This highlights the need for close collaboration with the corporate sector and the business community in data sharing by gaining their trust.

Due to financial and staff constraints, NBS was neither able to widen the scope of the survey to include the economic activities of the household nor widen the coverage by including more islands. The results of this survey could have been raised to national level if additional few islands with population size less than 2,500 were included in the sample.
